

# Series P78

## Dual pressure controls for Refrigeration, Air-conditioning and Heatpump Applications

### Product Bulletin

These dual pressure controls are designed for use in a variety of applications involving refrigeration high or low pressure. Models supplied have a "whole range" design, enabling them to be used with refrigerants R22, R134A, R404A, R410A, R744 (CO<sub>2</sub>), R717 (NH<sub>3</sub>), R290, R600 natural HC refrigerants CO<sub>2</sub> and all other non-corrosive refrigerants which are within the operating range of the control. They may also be used for other high or low pressure applications such as air, water etc. Models which can be used with ammonia are included in the program. Also models tested and approved to PED 2014/68/EU Cat. IV (supersedes DIN and TUV approval) are included in the program.

The P78 series pressure controls may be used for control functions or limit functions, depending on model number. All models are provided with alarm contacts (except P78ALA). All standard models have phosphor bronze bellows and brass pressure connections. Models for use with ammonia (NH<sub>3</sub>) are provided with stainless steel bellows and connectors. Devices conforming to PED 2014/68/EU Cat. IV (HP models) have the fail-safe function with double bellows. Their IP54 classification means that these pressure controls are suitable for almost all applications.

P78 Series Controls for Hazardous Location Applications use a low energy signal from inside an explosive zone on commercial refrigeration and air-conditioning applications. The controls have special dry circuit switches with gold-plated contacts for improved contact characteristics required in low voltage, low current circuits.

They are designed to operate in

- Group II, Zone 2 (per the ATEX Directive) environments.
- Class I, Division 2, Group D (per NFPA 70 and CSA C22.2) environments.
- **High refrigerant pressure**  
Suitable for R410A and CO<sub>2</sub> subcritical applications
- **Gold plated contacts**  
For low current applications custom models with gold plated contacts may be requested. Contact your salesman.
- **Generous wiring space**  
Easy wiring and maintenance
- **Splash-proof enclosure (IP54)**  
Can be used for indoor/outdoor applications
- **Trip-free manual reset**  
Override is not possible in the control function
- **Patented separate alarm contacts for both low pressure and high pressure cut-out (except P78ALA)**  
Easy monitoring of the fault location
- **ATEX approved**  
For use with flammable refrigerants (R290, R600).  
Meets 2014/34/EU ATEX directive.

## Electrical connection P78 hazardous location applications

Use only cables and cable entries approved for propane applications. Do not allow cables to come into contact with sharp edges. Install cables with adequate stress relief to avoid pulling at the terminal.

### Intrinsic safety protection method

#### Entity parameters (P78 pressure control parameters)

Maximum switch loads	
Pi max (P max)	1 W
Ui Max (V max)	30 V
Ii Max (I max)	0.1 A
Ci max	0.5 nF
Li max	0.2 $\mu\text{H}$

Selected associated apparatus providing output entity parameters must be third party listed for the application and have intrinsically safe entity parameters conforming with table below.

#### Intrinsically safe entity parameters for the associated apparatus

P78 pressure control		Zener barrier or suitable associated apparatus
Ui Max (V max)	$\geq$	Voc or Vt (or Uo)
Ii Max (I max)	$\geq$	Isc or It (or Io)
Pi max (P max)	$\geq$	Po
Ci + Ccable	$\leq$	Ca (or Co)
Li + Lcable	$\leq$	La (or Lo)

**IMPORTANT:** The controls are intended to control equipment under normal operating conditions. Where failure or malfunctioning of the controls could lead to an abnormal operating condition that could cause personal injury or damage to the equipment or other property, other devices (limit or safety controls) or systems (alarm or supervisory systems) intended to warn of or protect against failure or malfunctioning of the controls must be incorporated into and maintained as part of the control system.

#### Type number matrix

<b>P78LCA</b>	Automatic reset both sides
<b>P78MCA</b>	Automatic reset low side manual reset high side
<b>P78PGA</b>	Manual reset both sides
<b>P78LCW</b>	Automatic reset both sides conform PED 2014/68/EU
<b>P78MCB</b>	Automatic reset low side manual reset high side conform PED 2014/68/EU
<b>P78MCS</b>	Automatic reset low side manual reset high side conform PED 2014/68/EU
<b>P78PGB</b>	Manual reset both sides conform PED 2014/68/EU
<b>P78PLM</b>	2 x manual rest HP conform PED 2014/68/EU
<b>P78ALA</b>	Dual fan cycling control (2 x SPST close high)
<b>P78XLCW</b>	HP or LP limit (autoreset) HP conforming to PED 2014/68/EU HP or LP conforming to ATEX 2014/34/EU

## Adjustment

On most models the range scale indicates the high switch point (exception: LP side of P78PGA,P78PGB, here the range scale indicates the low switching point).

To obtain low switch point deduct differential value from the high switch point.

## Repair and replacement

Repair is not possible. In case of an improperly functioning control, please check with your nearest supplier. When contacting the supplier for a replacement you should state the type/model number of the control. This number can be found on the data plate or cover label.

## Contact functions (see also "Type number selection" tables)

<b>LP</b>	A - C opens on pressure decrease A - B closes simultaneously
